fluid Operations and Ontotext Close Resell Agreement

January 30, 2012

Walldorf/Sofia – fluid Operations™ and Ontotext announce a mutual resell agreement. fluid Operations is the leading provider of innovative cloud and data management solutions based on semantic technologies. Ontotext offers semantic technologies as well as text and web mining solutions. As part of the resell agreement, the partners will bundle and market their know-how and technologies in the areas of semantic technologies and Linked Data.

OWLIM and Information Workbench - Integrated Solution for the Interaction with Linked Data

The joint solution is based on the Information Workbench™ from fluid Operations and the semantic database OWLIM from Ontotext. OWLIM provides a robust semantic repository for scalable data management, while the Information Workbench offers advanced capabilities for visualization, exploration and interaction with the integrated database. Together, OWLIM and the Information Workbench offer an integrated solution from backend to frontend. The solution covers the entire lifecycle of interacting with Linked Data, including the integration of heterogeneous data from different data sources, an innovative inference engine, intelligent query answering, collaborative knowledge acquisition and augmentation, as well as business intelligence and advanced analytic capabilities.

Linked Data – The Core of Semantic Technologies

The term Linked Data refers to data represented in a unifying, machine-readable data format that makes it possible to semantically interlink and connect heterogeneous resources at data level. Exhibiting a high degree of interoperability and ease of reuse, Linked Data has become a prominent choice for publishing data on the Web as Linked Open Data. These principles are becoming increasingly popular also in the enterprise world, with internal data being represented as Linked Enterprise Data. The combination of Linked Enterprise Data with Linked Open Data, offers great potential for integrating heterogeneous data from different sources. Company internal data can be easily enriched with data freely available on the Web. This allows for innovative data management across the boundaries of individual data silos and company departments. More and more companies from various industry verticals, such as life sciences, social media, media and publishing, digital libraries, are starting to implement Linked Data and semantic technology strategies

Joint Activities in the New Year

In addition to the new resell agreement, the partners have also planned joint marketing activities for 2012. fluidOps and Ontotext will kick off their partnership with SemTechBiz Berlin 2012 taking place from February 6 to 7.

About fluid Operations

fluid Operations (fluidOps) is a young, innovative software company headquartered in Walldorf, Germany. Its focus lies on the research and development of novel technologies for the intelligent data center and information management in the enterprise. With the Information Workbench, fluidOps has developed a highly customizable platform for Linked Data application development, including support for the semantic integration of heterogeneous data sources, collaborative knowledge acquisition, and semantic search. For more information about fluidOps and its products please visit www.fluidops.com.

About Ontotext AD

Ontotext AD is a supplier of core semantic technology, text mining and web mining solutions. We are a proven, competent and cost-effective partner in development of tools and solutions based on semantic technologies; software engineering, performance optimization and ontology design; data integration, management and publishing; and professional services for the practical implementation of cutting-edge technology. Ontotext world-class competencies are rooted in the massive volume of ongoing research activities in projects with total budget of more than EUR 100 million. As a member of W3C we are involved in the development of the vision and standards powering the development of the web. Our customers and partners include several top-10 pharmaceutical companies, top-5 US military contractor, financial intelligence institutions, leading UK media and news agencies, as well as, customer-facing semantic technology companies, e-business and social media start-ups.
